

PMM Sherpa

OVERVIEW

The senior PMM, in your pocket. And in your agent's stack.

A product marketing advisor trained on 38,000+ chunks of senior PMM thinking. Used by humans in a chat UI. Wired into agents over MCP.

Trusted by hundreds of PMMs across 100+ orgs

PMMs make **50 judgment calls a week.** Mostly alone.

01 Is our positioning actually different, or just louder?

The answer rarely lives in your CRM.

02 Why are we losing to a worse competitor?

Battlecard work that should take an hour takes a week.

03 Is this homepage converting, or just performing on Dribbble?

You need a senior eye, not another tool.

04 A general-purpose LLM dresses up your thinking.

It does not bring frameworks, war stories, or a point of view.

Used by humans. Wired into **agents**.

Sherpa shows up two ways. As a chat product where you ship work in minutes. And as an MCP server, so the AI tools and agents you already use can think like a senior PMM, not a clever junior.

Same brain. Same canon. Same point of view. Wherever you work.

Six jobs PMMs run on Sherpa every week.

01

Landing page audit

Cited critique on positioning, hero, social proof, conversion friction.

02

Positioning sharpener

From category and ICP to the one sentence your buyer remembers.

03

Battlecard from a prompt

Why-we-win, why-they-win, traps and trigger lines, in one pass.

04

GTM and launch plan

Tier, narrative, channel mix, internal enablement, day-one to day-thirty.

05

Pricing pressure-test

Anchor logic, packaging shape, willingness-to-pay signal, where it leaks.

06

Messaging house

Pillars, proof, value props that map to actual buyer questions.

"Audit www.stripe.com."

One prompt. Cited audit.

Sherpa returns the structured critique a senior PMM would give in a working session. Frameworks named, examples cited, point of view intact.

"Audit www.stripe.com. What's converting? What's broken? What would you change first?"

What Stripe Gets Right

The homepage is doing a lot of things well. Start with the hero: **"Financial infrastructure to grow your revenue"** is clean, category-defining positioning. It doesn't oversell. It tells you exactly what Stripe is and why it exists. That's harder than it looks.

The social proof architecture is genuinely strong. **\$1.9T in payments volume. 99.999% uptime. 200M+ active subscriptions.** Those aren't vanity metrics. They answer the three questions every enterprise buyer has before they even read the copy: Is this real? Is it reliable? Can it scale with me? Hertz, URBN, Instacart, Le Monde. The customer logos aren't random. They span geographies, verticals, and business models, which signals "we handle complexity."

The product visualization is also doing real work. Showing live checkout flows in English, German, and Japanese, with Klarna, Apple Pay, Cash App, and crypto all visible simultaneously, is a smarter conversion argument than any feature list. Buyers see their use case in the UI before they read a word.

What's Broken (or Just Underperforming)

Here's the tension worth sitting with: **Stripe is trying to serve three very different buyers on one homepage.** The solo developer who wants to start in 10 minutes. The platform builder embedding payments into a SaaS product. The enterprise CFO evaluating a \$5B commerce consolidation. Each of those buyers needs a different signal to convert, and right now the page tries to speak to all three simultaneously.

The result is **navigation overload without a clear primary CTA hierarchy.** "Get started" and "Contact sales" sit side by side in the footer. But a developer and a Hertz-sized enterprise buyer should never land on the same conversion path. The page doesn't route them.

A second friction point: **the "agentic commerce" section.** The concept is real and forward-looking, but the copy ("Monetize through agentic commerce") assumes the reader already

Not "AI that helps." A senior PMM that pushes back.

"PMMSherpa feels like working with an experienced partner. The frameworks are built in, and its strong point of view challenges my thinking in ways other tools don't."

Brian Rimmel · Principal PMM, Palo Alto Networks

"Most AI tools make you do the thinking and then dress it up. Sherpa does the opposite. It comes in educated, applies the right frameworks, and pushes back when your reasoning isn't there yet."

Asli Simsek · PMM, CMO Alliance Member

F2

"The output isn't just fast; it's grounded in real-world frameworks and actual PMM experience. It's levels above what I get from a general-purpose model like Claude."

VP of Product Marketing · Fortune 200 ERP Provider

Use it as a product. Or wire it into **your stack**.
